

Green Jobs are Middle-Skill Jobs

Green-collar jobs are family-supporting jobs that contribute significantly to preserving or enhancing environmental quality. The majority of current and future jobs in the green economy are middle-skill jobs. Middle-skill jobs require training beyond high school, but less than a four-year degree. Training policies and investments should be targeted to meet this labor market demand.

Green-collar middle-skill jobs range from entry-level to high-wage in diverse industries, including renewable energy, energy efficiency, and biofuels. Within these industries, green-collar work includes building, construction, assembly, installation, operation, maintenance, transportation, and manufacturing.
