Growing Florida’s Economy by Investing in the Forgotten Middle

Middle-skill jobs, which require more than high-school, but less than a four-year degree, make up the largest part of America’s and Florida’s labor market. All too often, key industries in Florida are unable to find enough sufficiently trained workers to fill these jobs. As a result, job creation and economic growth are stifled. We can’t afford that—particularly now—in Florida.

Years ago, our nation established a number of workforce development programs to meet this demand by preparing Florida’s workers for middle-skill jobs. But since then, our federal education and training policies have largely forgotten about these jobs, and investments in the programs that prepare middle-skill workers have plummeted. As a result, in Florida too many workers struggle to find decent jobs and too many employers struggle to find skilled employees. Our federal policymakers—including Florida’s congressional delegation—must address the investment shortfall in the forgotten middle of the labor market. Florida simply can’t afford the lost jobs and productivity that complacency brings.

Demand for Middle-Skill Jobs is Strong, Will Remain Strong in Florida

Middle-Skill Jobs are the Backbone of Florida’s Economy

Middle-skill jobs are key to our nation's health, its infrastructure and its economic growth. Many of these jobs cannot be outsourced: from the care of our sick and elderly, to the repair of our computerized cars, to the running and maintenance of our factories' advanced machinery, to the construction of our nation's bridges and buildings. Middle-skill jobs can provide good wages and career paths for America’s and Florida’s workers.

Examples of High-Demand Middle-Skill Jobs in Florida	Industry	2009 Median Annual Earnings*
Air Traffic Controllers	Transportation	\$115,510
Police and Sheriff’s Patrol Officers	Protective Services	\$52,520
Civil Engineering Technicians	Engineering	\$48,650
Automotive Mechanics	Installation, Maintenance, Repair	\$35,610
Carpenters	Construction	\$33,790

* 2009 median annual earnings for all occupations in Florida = \$30,320

Florida's Skills Mismatch: A Middle-Skills Gap

In 2009, about 51 percent of Florida's jobs were in middle-skill occupations. But only 43 percent of the state's workers likely have the appropriate training for these jobs.

Florida's Competitiveness Requires Federal Investments in Training for Middle-Skill Jobs

To maintain a strong economy, Florida must address its middle-skills gap by investing in a skilled workforce. Training just another 5 percent of Florida's workforce for middle-skill jobs would require a new investment, beyond existing state and federal programs, of at least \$2.2 billion or 4.9 times Florida's current federal funding for all job training, adult education, vocational education, and financial aid for community college students.
